

## COMMUNICATE ON THE 2023 TURNOVER

Laval on February 2, 2024.

The 2023 financial year results in a consolidated turnover of €73.9 million an increase of 32% compared to 2022.

Continuing from the start of the year, the progression of activity has confirmed in the second half. This increase in turnover is mainly explained by the development of new markets driven by the AMBITIONS 2025 project and the improvement in the availability of components.

The results for this year are therefore positive, marked however by the sharp increases in production costs and the financial repercussions of the losses suffered at the Laval site.

For 2024, the visibility is quite different depending on the sectors and the supply of some components remains difficult. Traditionally lower at the start of the year, the general level activity should be slightly increasing.

The next press release concerning the results for the 2023 financial year will be published on April 5, 2024.
